**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-20, drawn to a queuing management system and method and a passageway management system and method, classified in class 382, subclass 104.
  - II. Claims 21-29, drawn to a vessel type detection system and method, classified in class 382, subclass 190.
  - III. Claims 30-34, drawn to an unusual movement detection system and method, classified in class 701, subclass 117.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as determining the type of vessel that passes through the passageway. In the instant case, invention III has separate utility such as determining any unusual movements of a vessel. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
